

# Data Visualization using Looker Data Studio

<https://github.com/kaopanboonyuen/CS101>

# Topics

- Part 1: Introduction to Looker Studio
- Part 2: Disaster Analysis Dashboard
- Part 3: Physician Analysis Dashboard

# What is Looker Studio?

- Looker Studio is a data visualization platform that makes reports easier to create and understand.
- 
- You can do all of the following in Looker Studio:
  - Use graphics, tables or bar charts.
  - Decide what type of numbers and data you want to share.
  - Add text to explain data points or what's displayed in the report.
  - Change fonts and colors.
  - Brand the report with your client's logo.
  - Add a video to explain something to your client.

# Looker Studio Vs. Data Studio

While Looker Studio touts many of the same features as the former Data Studio, the new name also brings new features.

- Free version and Pro version (paid).
- Different modeling method (LookML).
- Looker integration with Google Sheets.
- More flexible data modeling features.
- Supports 50+ SQLs and databases.
- Merging features from different data sources.
- One of the key differences between Looker and Data Studio is the way data is modeled. Looker Studio uses LookML (Looker Modeling Language).

# Getting Started With Looker Studio

There are a few key areas to ensure your first Google Looker Studio report is a success. These include:

- Choosing a template or **dashboard**.
- Connecting data sources.
- Choosing metrics that matter.
- **Sharing reports**.

# Connect A Data Source

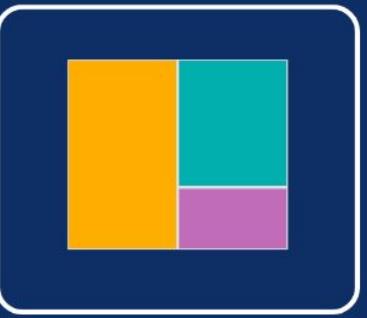

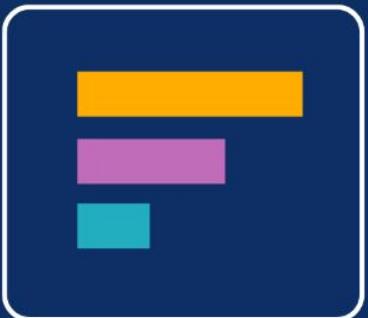

## Google Connectors (23)

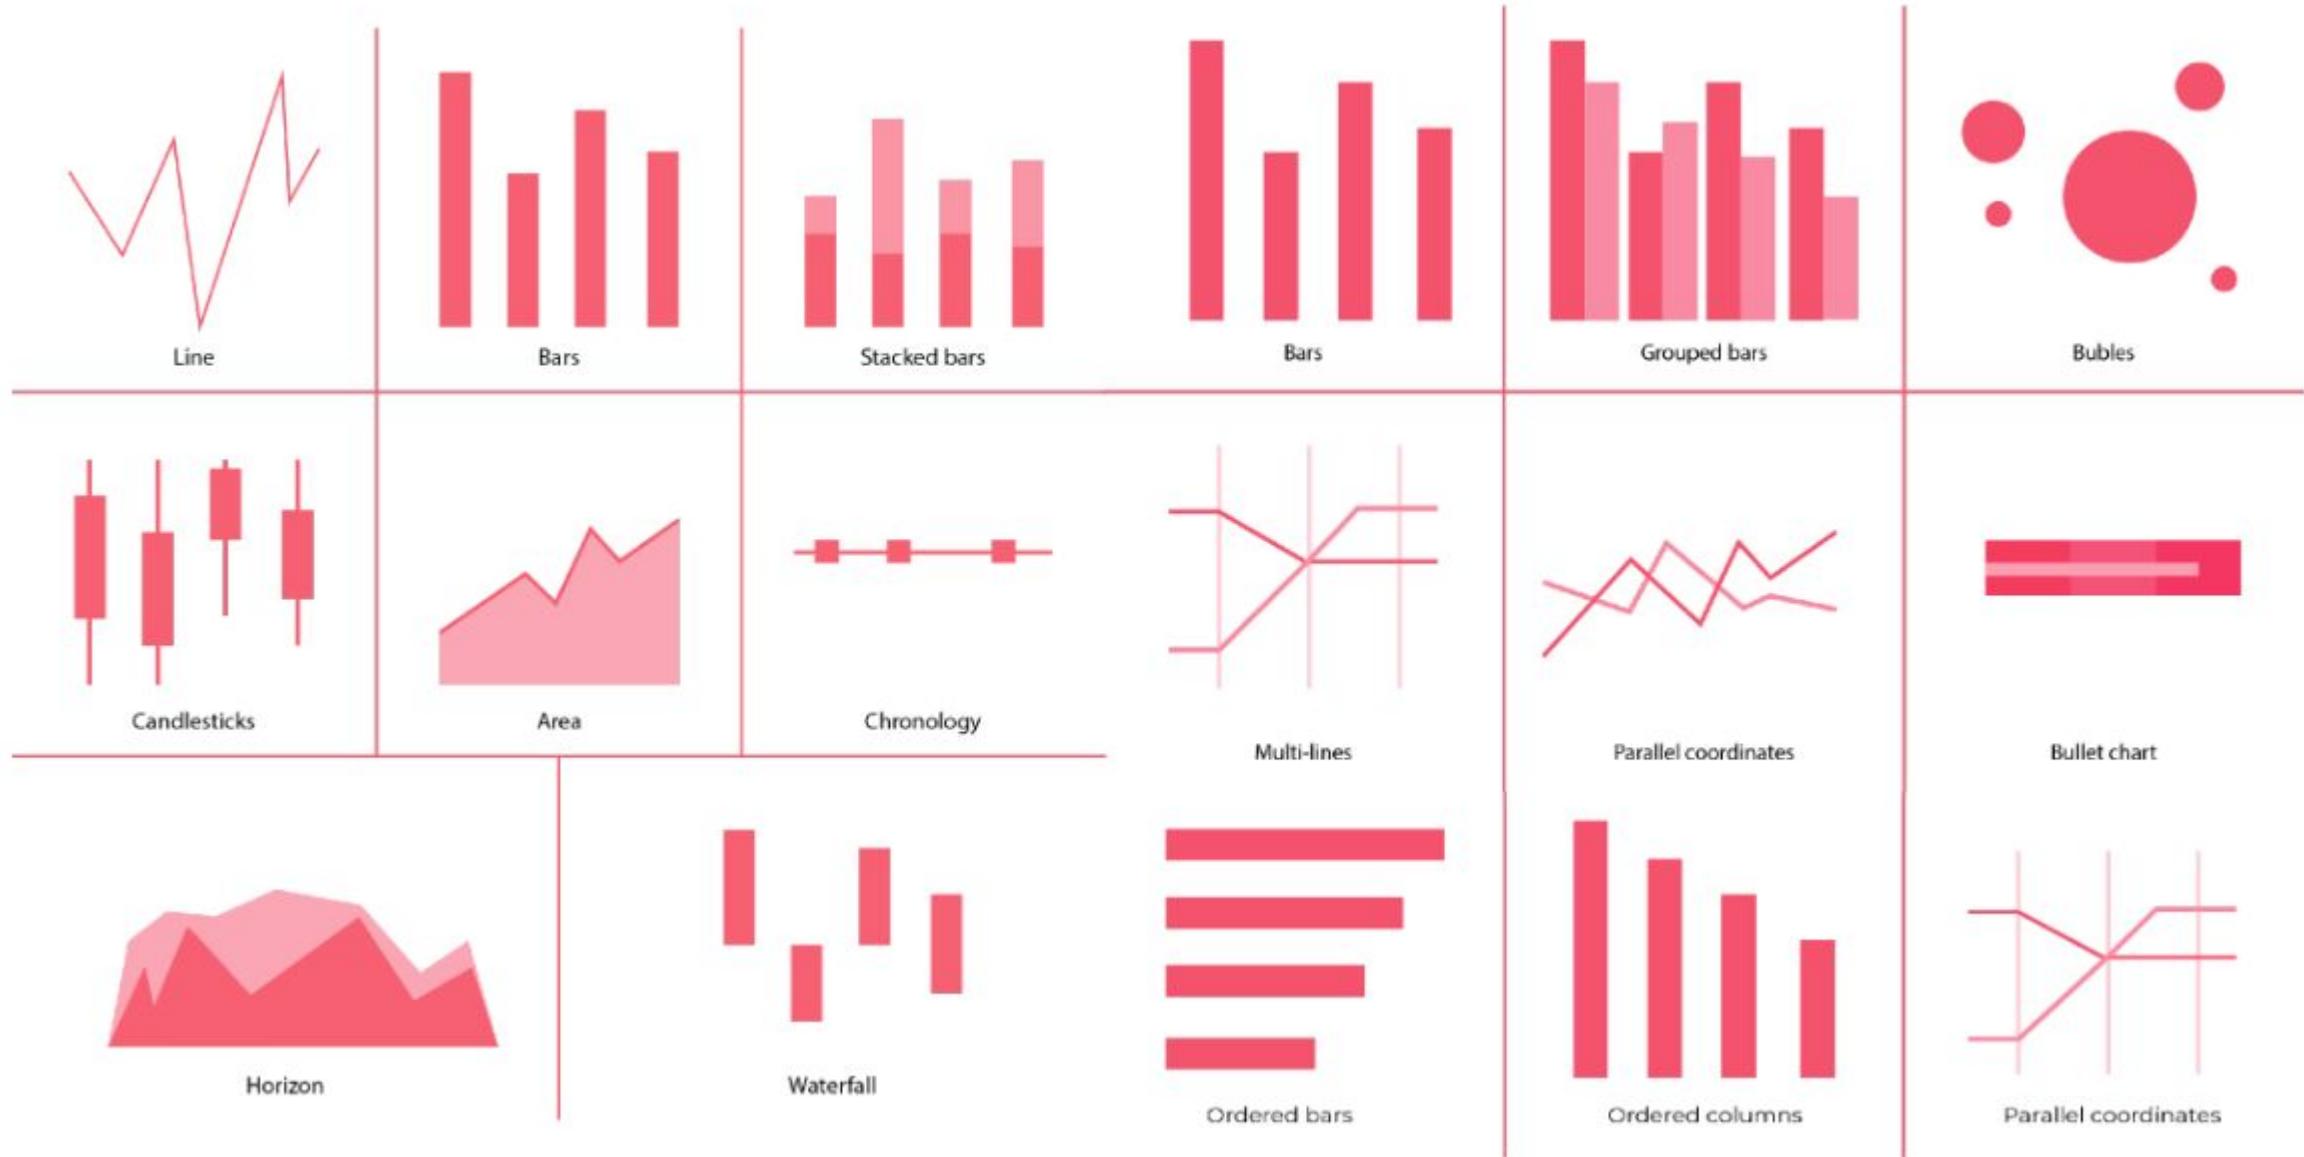

Connectors built and supported by Looker Studio [Learn more](#)

 <b>Looker</b> By Google Connect to your Looker semantic models.	 <b>Google Analytics</b> By Google Connect to Google Analytics.	 <b>Google Ads</b> By Google Connect to Google Ads performance report data.	 <b>Google Sheets</b> By Google Connect to Google Sheets.
 <b>BigQuery</b> By Google Connect to BigQuery tables and custom queries.	 <b>AppSheet</b> By Google Connect to AppSheet app data.	 <b>File Upload</b> By Google Connect to CSV (comma-separated values) files.	 <b>Amazon Redshift</b> By Google Connect to Amazon Redshift.
 <b>Campaign Manager 360</b> By Google Connect to Campaign Manager 360 data.	 <b>Cloud Spanner</b> By Google Connect to Google Cloud Spanner databases.	 <b>Cloud SQL for MySQL</b> By Google Connect to Google Cloud SQL for MySQL databases.	 <b>Display &amp; Video 360</b> By Google Connect to Display & Video 360 report data.
 <b>Extract Data</b> By Google Connect to Extract Data	 <b>Google Ad Manager 360</b> By Google Connect to Google Ad Manager data.	 <b>Google Cloud Storage</b> By Google See your files in Google Cloud Storage.	 <b>Microsoft SQL Server</b> By Google Connect to Microsoft SQL Server databases.

HOW TO USE

# Data Visualization in your Infographics

# To create a chart

Time series

Bar chart

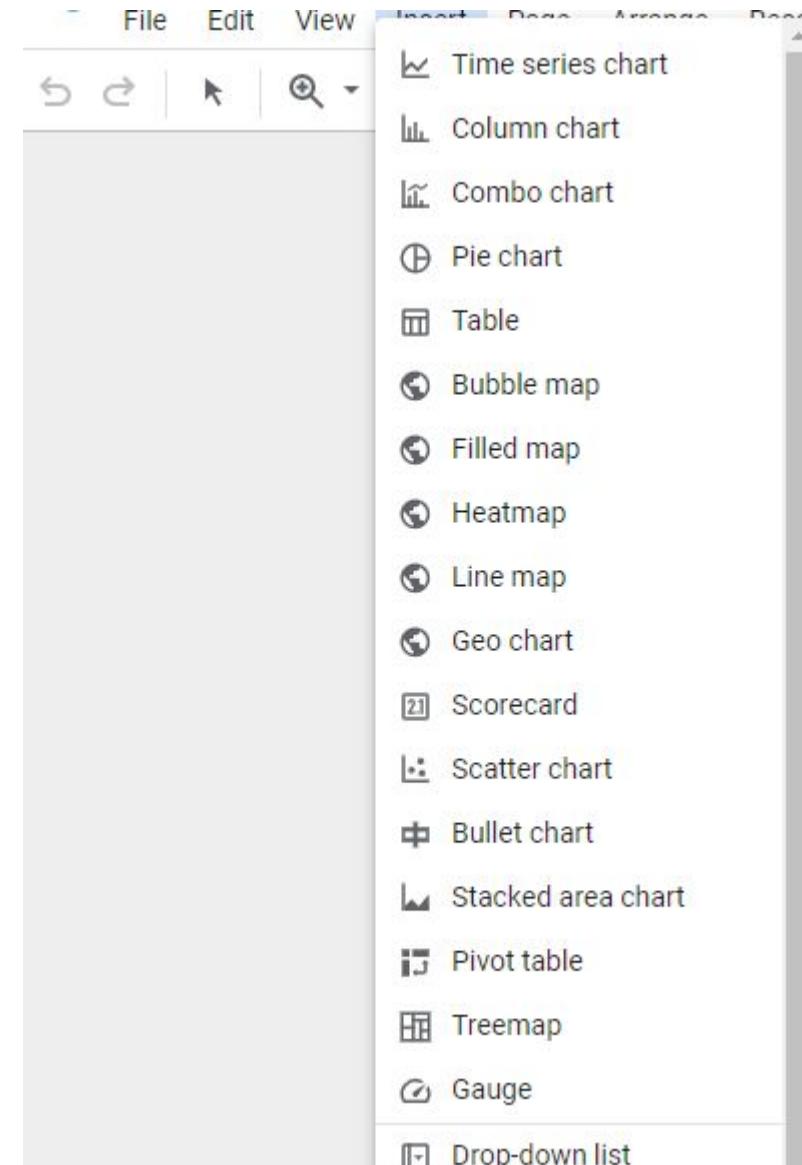

Pie chart

Tables

Scorecards

Bullet charts

Much more.

# Sharing Reports

The following options are available for sharing a Looker Studio report:

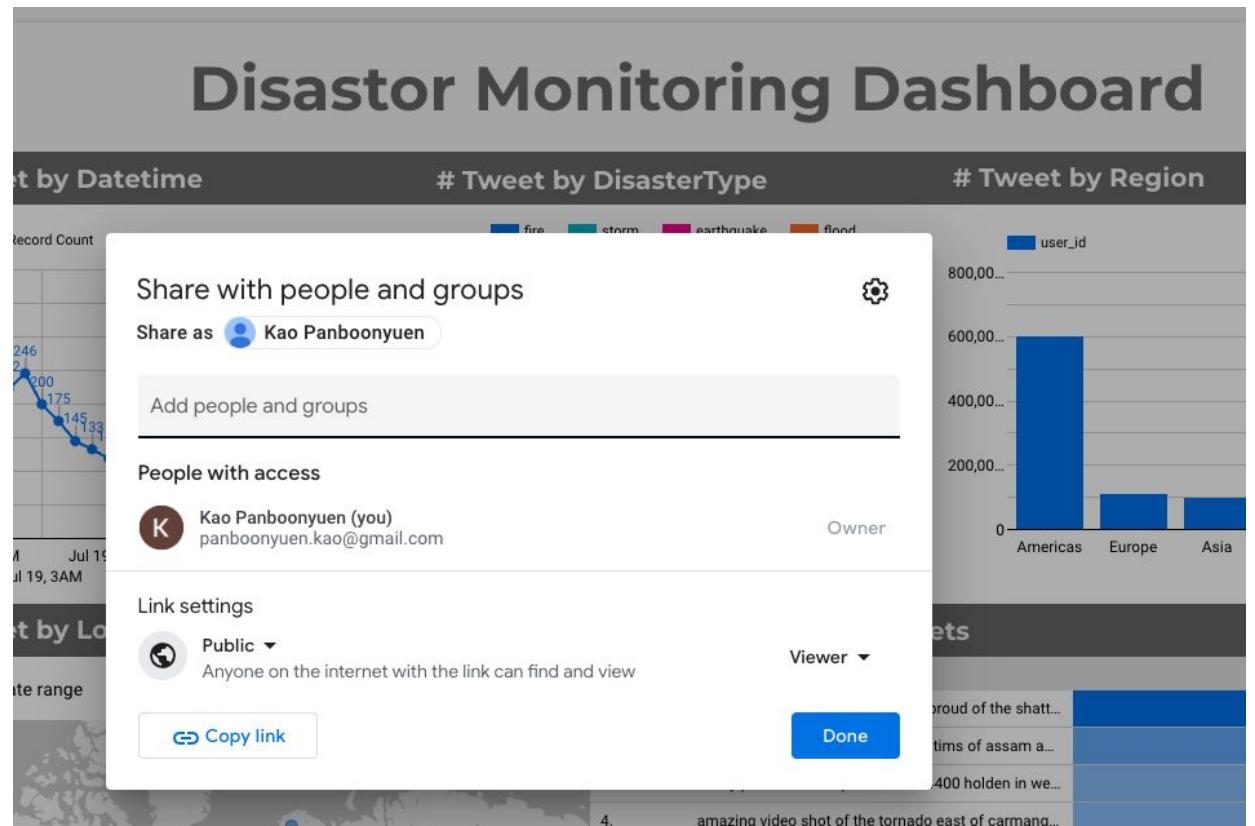

Invite people.

Schedule email delivery.

Get report link.

Embed report.

Download report.

# Sharing Reports

You can choose from:

- **Restricted.** Only people who you have shared the report with can open the link.
- **Unlisted.** Anyone on the internet with the link can view (or edit – choose this setting carefully).
- **Public.** Anyone on the internet with the link can find and view (or edit – choose this setting carefully).

# Part 1: Introduction to Looker Studio

# Part 1: Introduction to Looker Studio

The screenshot shows the Looker Studio interface. At the top, there's a search bar labeled "Search Data Studio". Below it, a navigation bar includes "Recent" (which is selected), "Reports" (highlighted in blue), "Data sources", and "Explorer". To the right of the navigation are icons for help, settings, and user profile.

On the left, a sidebar titled "Recent" lists items: "Shared with me", "Owned by me", and "Trash".

The main area has three sections: "Start with a Template" (showing "Blank Report" and "Tutorial Report"), "Template Gallery" (showing a template for "ACME" and "Acme Marketing Google Analytics"), and a table of recent reports:

Name	Owned by anyone	Last opened by me
Untitled Report	Kittipoch Saengsai	Aug 17, 2020
Medical Resources 2018 Dashboard	Kittipoch Saengsai	Aug 17, 2020
Disaster Monitoring Dashboard	Kittipoch Saengsai	Aug 17, 2020

- Cloud-based Data visualization tools.
- Easy to use. Just like using traditional presentation tool to represent data.
- Free to use. Can embed the data individually up to 100Mb per report.
- Connect to external data with plenty of external data connections.

# Start using Looker Studio

1. Go to <https://lookerstudio.google.com/>
2. Select menu **Create > Report**
3. In **Add data to report** section, select **File Upload**.
4. Upload your .csv file. (Up to 100Mb)
5. When **Status** shows **Uploaded**, Select **Add**.

The screenshot shows the Looker Studio interface. On the left, there's a navigation sidebar with 'Create' highlighted. The main area has a 'File Upload' card with an 'Upload' button and instructions to connect to CSV files. To the right, a table lists uploaded data sets, showing one entry: 'text\_filtered.csv' uploaded at 8/17/20 8:05 AM, 3 MB, and a green 'Uploaded' status. Below the table are 'DELETE DATA SET' and 'Add' buttons.

File name	Uploaded at	Size	Status
text_filtered.csv	8/17/20 8:05 AM	3 MB	Uploaded

DELETE DATA SET

**Add**

# Basic steps to use Looker Studio

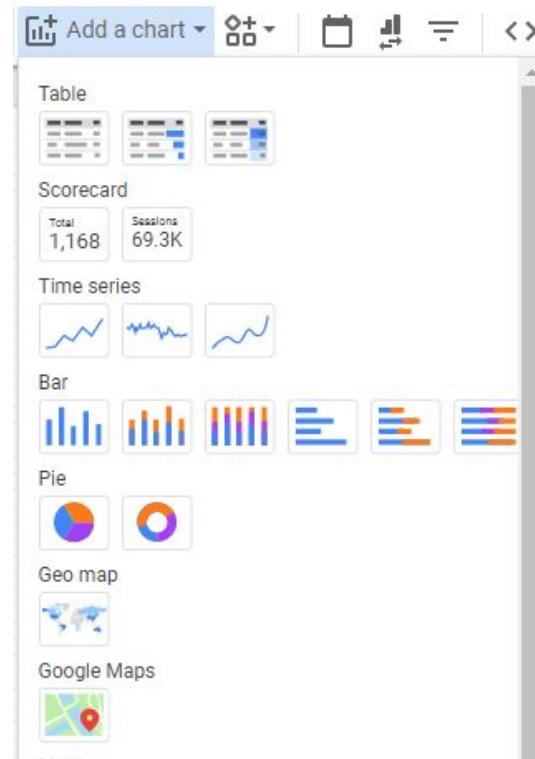

## 1. Edit table schema.

- ▶ Select Resource > Manage added data sources.

← EDIT CONNECTION | FILTER BY EMAIL

Index	Field	Type
1	clean_text	RBC Text
2	country	Country
3	country_code	Country Code
4	created_at	Date (YYYYMMDD)
5	date	Date (YYYYMMDD)
6	disaster_type	RBC Text
7	favorite_count	123 Number
8	followers_count	123 Number
9	friends_count	123 Number
10	text	RBC Text

## 2. Add a Chart.

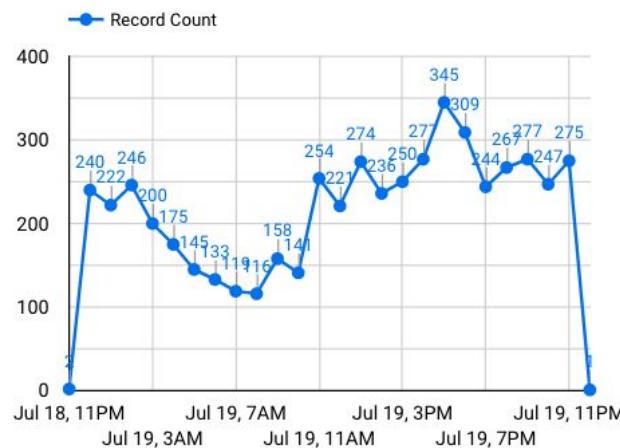

## 3. Customizes Chart Data and Style.

**DATA**      **STYLE**
